The global Perovskite Laser Scribing Equipment market size is predicted to grow from US$ 58.70 million in 2025 to US$ 348 million in 2032; it is expected to grow at a CAGR of 29.0% from 2026 to 2032.

Perovskite Laser Scribing Equipment is specialized photovoltaic manufacturing equipment used to perform high-precision P1, P2, P3 and sometimes P4 laser scribing processes in perovskite solar cells and perovskite thin-film modules. The equipment is mainly used to pattern transparent conductive oxide layers, perovskite functional layers, charge transport layers, metal electrodes, and module interconnection regions, enabling monolithic series connection, reducing dead area, improving geometric fill factor, and supporting scalable module production. Main product forms include R&D laser scribing systems, P1/P2/P3 integrated laser scribing machines, multi-laser-source scribing systems, inline laser scribing equipment, roll-to-roll compatible laser scribing systems, and perovskite tandem module scribing systems. This category excludes general laser cutting machines, crystalline silicon cell laser equipment, CIGS/CdTe-only scribing equipment, complete perovskite production lines, coating equipment, encapsulation equipment, and module testing equipment.The industrial chain of Perovskite Laser Scribing Equipment includes upstream suppliers of UV lasers, green lasers, infrared lasers, ultrafast lasers, beam delivery systems, galvanometer scanners, precision motion stages, linear motors, optical lenses, focusing modules, vision alignment systems, vacuum adsorption platforms, control software, cleanroom components, dust extraction systems, sensors, and safety protection devices. Midstream equipment manufacturers integrate laser sources, optical paths, motion platforms, alignment systems, glass substrate handling, process recipes, P1/P2/P3 scribing modules, debris removal, automation control, and quality monitoring into complete laser scribing equipment. Downstream applications include perovskite solar cell manufacturers,

perovskite module pilot lines, tandem solar cell manufacturers, photovoltaic research institutes, thin-film module companies, and future large-area perovskite production lines. Supporting services include process development, laser parameter optimization, installation, commissioning, alignment calibration, software upgrades, maintenance, spare parts supply, operator training, and lifecycle technical support.In 2025, global Perovskite Laser Scribing Equipment production reached approximately 40 units, with an average global market price of around US$1,500,000 per unit. The gross profit margin of major companies in the industry is between 30%–50%. In 2025, the global production capacity of perovskite laser scribing equipment was approximately 57 units.

The Perovskite Laser Scribing Equipment market is in an early commercialization and pilot-line expansion stage, driven by perovskite solar module scale-up, tandem solar cell development, thin-film photovoltaic manufacturing, and high-precision P1/P2/P3 interconnection requirements. Laser scribing is a key process for monolithic perovskite modules because it creates narrow interconnection lines, reduces inactive dead area, and improves module geometric fill factor and output performance. Current demand mainly comes from R&D lines, pilot lines, demonstration production lines, and early commercial module projects rather than mature GW-scale mass production. Suppliers are improving laser wavelength selection, ultrafast processing, alignment accuracy, thermal damage control, debris removal, large-area glass handling, inline automation, and compatibility with tandem structures. Overall, the market remains small in 2025, but it is expected to grow rapidly as perovskite pilot lines move toward commercial-scale module production and tandem photovoltaic technology becomes more industrialized.
