## Abstracts

The global Perovskite Precursors market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Perovskite precursors refer to raw materials or intermediates used to prepare perovskite materials. Perovskite materials have a unique crystal structure, usually ABX<sub>3</sub> type, where A is a larger cation, B is a metal cation, and X is an anion. Perovskite precursors usually refer to compounds or ions that can be converted into perovskite structures. These precursors can be deposited on a substrate through specific chemical processes in solution, such as spin coating, solution processing, etc., and eventually form a perovskite layer.
