The global Peroxide Based Groundwater Remediation Chemicals market size is predicted to grow from US\$ 420 million in 2025 to US\$ 789 million in 2032; it is expected to grow at a CAGR of 9.5% from 2026 to 2032.

In 2024, global peroxide based groundwater remediation chemicals production reached approximately 171,892 ton, with an average global market price of around USD 2,500 per ton. A factory gross profit of USD 500 per ton with 20% gross margin. A single line full machine capacity production is around 5,000 ton per line per year. downstream demand is concentrated in environmental remediation, municipal and industrial water treatment, infrastructure development. A petroleum service station groundwater plume containing BTEX was treated using sodium persulfate + PERMEOX® Ultra (calcium peroxide) injections. Peroxide-based groundwater remediation chemicals are strong oxidizers like hydrogen peroxide (H₂O₂), calcium peroxide, or sodium percarbonate, injected into contaminated soil/water to destroy organic pollutants (hydrocarbons, chlorinated solvents) by converting them into less harmful substances (CO₂, water) through powerful reactive species like hydroxyl radicals, a process called In Situ Chemical Oxidation (ISCO). These peroxides act as slow-release oxygen or peroxide sources, often needing activators (iron, heat, UV) to generate radicals for rapid contaminant destruction, making them a cost-effective, in-place treatment for hazardous waste sites.

United States market for Peroxide Based Groundwater Remediation Chemicals is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
