The global Peroxycarboxylic Acid market size is predicted to grow from US\$ 1294 million in 2025 to US\$ 1828 million in 2032; it is expected to grow at a CAGR of 5.1% from 2026 to 2032.

Peroxycarboxylic Acid is a class of organic peroxides with the general structure $R\text{-COOOH}$, formed by replacing the hydroxyl group (-OH) of a carboxylic acid with a peroxy group (-OOH); it is a highly reactive oxidizing agent widely used for disinfection, bleaching, epoxidation, and chemical synthesis. The supply chain begins upstream with key raw materials such as carboxylic acids (e.g., acetic acid), hydrogen peroxide, and acid catalysts (e.g., sulfuric acid), which are typically produced by petrochemical and chemical manufacturers. In the midstream, peroxycarboxylic acids are synthesized via equilibrium reactions between hydrogen peroxide and the corresponding carboxylic acids, often under controlled temperature and stabilization conditions due to their instability and safety risks. The products are then formulated into stabilized solutions or blends (e.g., peracetic acid solutions) and packaged using corrosion-resistant materials. Downstream, they are distributed through chemical suppliers and specialty distributors to end users across industries such as water treatment, food processing sanitation, healthcare sterilization, pulp & paper bleaching, and fine chemical synthesis, where their strong oxidizing and antimicrobial properties are essential. In 2025, global Peroxycarboxylic Acid output was about 1.0 million tons with 1.4 million tons of capacity, average prices of USD 1,200-2,200 per ton, and gross margins around 24%.

United States market for Peroxycarboxylic Acid is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
