The global Perphosphoric Acid market size is predicted to grow from US$ 112 million in 2025 to US$ 169 million in 2032; it is expected to grow at a CAGR of 6.0% from 2026 to 2032.

In 2025, global Perphosphoric Acid output reached about 50,000 tons and global capacity of around 56,000 tons. The average price is about USD 2,300 per ton, with gross margins near 28%. Perphosphoric Acid is a highly reactive phosphorus oxyacid containing peroxide (–O–O–) bonds, typically produced by reacting concentrated phosphoric acid with hydrogen peroxide under controlled conditions. It is a strong oxidizing agent used primarily as a chemical intermediate, laboratory reagent, disinfectant and sterilization component, bleaching agent, polymerization initiator, and specialty oxidant in fine chemical synthesis, pharmaceutical manufacturing, water treatment, electronics cleaning, and analytical chemistry. Its supply chain begins with upstream raw materials including phosphate rock, sulfuric acid, thermal or wet-process phosphoric acid, hydrogen peroxide, deionized water, stabilizers, catalysts, corrosion-resistant reaction equipment, and specialized storage and packaging materials. Midstream manufacturing involves phosphoric acid purification, controlled peroxide addition, low-temperature synthesis, concentration adjustment, stabilization, quality control, and filling into corrosion-resistant containers due to its instability and strong oxidizing nature. Downstream demand comes from manufacturers of specialty chemicals, pharmaceuticals, electronic chemicals, semiconductor cleaning agents, disinfectants and sterilants, water treatment chemicals, pulp and paper bleaching chemicals, research laboratories, and analytical reagent suppliers, where high purity, oxidizing strength, stability, and safe handling are critical performance parameters.

United States market for Perphosphoric Acid is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
