The global Personal Defense Pepper Spray market size is predicted to grow from US\$ 22.01 million in 2025 to US\$ 35.87 million in 2032; it is expected to grow at a CAGR of 7.3% from 2026 to 2032.

Pepper spray for personal defense is a non-lethal personal protective equipment with capsaicin or its synthetic derivatives (such as OC, Oleoresin Capsicum) as the main active ingredient. It sprays an irritating aerosol that quickly acts on the eyes, nose and respiratory tract of an attacker, causing severe burning pain, tearing, temporary blindness and difficulty breathing, thus giving the user valuable time to escape or call for help. In 2025, global Personal Defense Pepper Spray production reached approximately 1500 k units, with an average global market price of around 15 US\$/Unit. The production capacity of Personal Defense Pepper Spray reaches 1800 k units, and the industry's gross profit margin is approximately between 30% and 50%.

The widespread adoption of pepper spray for personal defense is driven by multiple factors, including increased public concern about security, heightened safety awareness among women and vulnerable groups, increased travel risks due to the booming urban nighttime economy, and the growing trend towards legalizing non-lethal self-defense tools. With the growth of the single-person population and the normalization of shared mobility and remote work, individuals have significantly increased their demand for controllable, portable, easy-to-use protective measures with low legal risks. At the same time, product design is constantly being optimized, such as adding safety locks, integrating lighting and alarm functions, and launching gel anti-drift technology, which further reduces the risk of accidental injury and increases user confidence, driving pepper spray from an emergency backup to an important part of daily safety equipment.
