Abstracts

According to this study, the global Personal Emergency Response Service market size will reach US\$ 8424 million by 2031.

Personal Emergency Response System (PERS) is designed to signal the presence of a hazard and the requirement of urgent attention for the older population as well as people with disabilities during an emergency. Medical personnel are dispatched by response associates to assist the affected people accordingly for further care.

The Personal Emergency Response Service (PERS) market has witnessed growth due to its role in providing quick assistance during medical or safety emergencies. PERS systems include wearable devices or home-based units with emergency buttons that connect users to a response center when activated. These services are particularly valuable for seniors and individuals with medical conditions, allowing them to call for help in case of falls, accidents, or other urgent situations. As aging populations and the desire for independent living increase, the PERS market continues to expand, offering peace of mind to users and their families by ensuring prompt response and timely assistance in critical moments.
