Respiratory hazards are some of the commonly measured hazards, gases, particular matter, biological organisms, and low concentration of oxygen are the commonly measured respiratory hazards. Other hazards like exposure to chemicals, physical hazards like vibration, noise, and radiation, are some of the other types of hazards that a worker can be exposed to in a high-risk work environment. In developing and developed nations, exposure monitoring is a mandatory requirement in many workplaces to ensure the safety of its workers. Companies are given the option of carrying out the tests themselves or they can outsource it to experts who will carry out the monitoring of exposure levels at regular intervals. These devices allow for continuous monitoring of the worker's health over a prolonged period of time to create an exposure record for each employee.
