The global Personal Hygiene Adhesives market size is predicted to grow from US\$ 2422 million in 2025 to US\$ 4233 million in 2031; it is expected to grow at a CAGR of 9.8% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

This report studies the personal hygiene adhesives market; personal hygiene adhesives can be liquid white glues.

Due to COVID-19, there was a slowdown in the market demand from various sectors in 2020 owing to specific rules and regulations imposed by countries. However, the industry witnessed a recovery in 2021, thus rebounding the demand for the market studied. The significant factors that are likely to drive the market studied in the forecast period include the increasing demand for disposable hygiene products and the growing adoption of female hygiene products in the Asia-Pacific region. However, on the flip side, increasing adhesive bleed challenges are likely to hinder the market's growth. Growing product innovations for providing better hygienic properties are expected to act as an opportunity for the market. The Asia-Pacific region is expected to be fastest growing market owing to its quickly growing adult and infant population.
