The global Personal Neutron Dosimeter market size is predicted to grow from US$ 122 million in 2025 to US$ 204 million in 2032; it is expected to grow at a CAGR of 7.7% from 2026 to 2032.

A personal neutron dosimeter is a portable radiation monitoring device used to measure neutron doses in workers in nuclear power plants, research laboratories, medical institutions, and radiation-sensitive industrial environments. This device provides accurate dose measurement, real-time or cumulative dose tracking, and alarm functions to ensure occupational safety. The personal neutron dosimeter industry chain includes upstream neutron-sensitive materials, semiconductors or scintillation detectors, electronic components, batteries, and display units; midstream manufacturers are responsible for equipment assembly, calibration, software integration, and quality testing; downstream applications cover nuclear facilities, medical radiology departments, industrial radiation detection, research laboratories, and radiation protection services. Supporting services include maintenance, recalibration, regulatory compliance, and safety training. In 2025, the global production of personal neutron dosimeters was approximately 104,200 units, with a global average market price of approximately US$1,200 per unit. The gross profit margin of major companies in the industry ranged from 35% to 55%. In 2025, the global production capacity of personal neutron dosimeters was approximately 138,900 units.

The Personal Neutron Dosimeter market is driven by stringent radiation safety regulations in nuclear, medical, and industrial sectors. Increasing awareness of occupational exposure risks and expanding nuclear energy programs support demand. Technological improvements in detector sensitivity, data logging, real-time monitoring, and wearable design enhance usability and reliability. Growth is expected in nuclear
