The global Personal Radiation Dosimeter market size is predicted to grow from US\$ 674 million in 2025 to US\$ 839 million in 2031; it is expected to grow at a CAGR of 3.7% from 2025 to 2031.

The Personal Radiation Dosimeter is of fundamental importance in the disciplines of radiation dosimetry and radiation health physics and is primarily used to estimate the radiation dose deposited in an individual wearing the device. For active type product?the revenue comes from the products sold to customers. For passive dosimetry methods such as TLD,OSL ?RPL, many players in the market earn money not only through the sales of dosimeters but also with service at the same time. For the OSL dosimeters, the products can be reused even for more than 10 years, so major players often package products and services for sale. So in this report we measure the market mainly through the products and service revenue segment.

The major manufacturers in the industry are Fluke Corporation, Chiyoda Technol Corporation and Mirion Technologies, with revenues accounting for 22.37%, 16.58% and 11.31% respectively in 2019.
