Personal video recorders (PVRs) refers to digital video recorder (DVR). It is an electronic device that records video in a digital format to a disk drive, USB flash drive, SD memory card, SSD or other local or networked mass storage device. The term includes set-top boxes with direct to disk recording, portable media players and TV gateways with recording capability, and digital camcorders. Personal computers are often connected to video capture devices and used as DVRs; in such cases the application software used to record video is an integral part of the DVR. Many DVRs are classified as consumer electronic devices; such devices may alternatively be referred to as personal video recorders (PVRs), particularly in Canada.

The global market for Personal Video Recorders (PVRs) refers to the market for devices that allow individuals to record, store, and playback television content on their own schedule. PVRs have become increasingly popular in recent years due to their ability to give users greater control over their television viewing, and the ability to watch content at a time that is convenient for them. PVRs typically come equipped with a hard drive, which allows users to record and store large amounts of television content. These devices also come with features such as the ability to pause and rewind live television, as well as the ability to skip through commercials. The demand for PVRs is driven by

the growth of the digital television industry, with more and more people switching to digital television services. Additionally, the rise of streaming services has also contributed to the growth of the PVR market, as they provide users with the ability to record and store content from streaming services as well. The global market for PVRs is highly competitive, with a large number of manufacturers and suppliers offering a range of products with different features and capabilities. Manufacturers are continuously developing new technologies and features to improve the performance, functionality, and ease-of-use of PVRs. One of the key trends in the global PVR market is the integration of PVR functionality into smart TVs and other digital devices. This trend is driven by the increasing popularity of smart home technologies and the desire for users to have a more seamless and integrated viewing experience.
