The global Pesticide Residue Test Equipment market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of % from 2025 to 2031.

The pesticide residue rapid tester can be widely used in the detection of pesticide residues in fruits and vegetables by government vegetable detection centers at all levels, Farmers' market, supermarkets, environmental protection organizations, Vegetable farming bases, restaurants, vehicles, laboratories and other food safety detection and monitoring places. Can accurately and quickly detect organic phosphorus and carbamate pesticide residues in vegetables, fruits, grains, tea, and soil. The pesticide residue tester is based on the kinetic principle of Enzyme catalysis. If the tested sample contains organophosphorus or carbamate pesticides, it will inhibit the activity of cholinesterase and affect the reaction speed of the color system. The pesticide residue (inhibition rate) in the tested sample is measured by measuring the change rate of the absorbance of the color system with time.
