Pesticide seed coating agent is a factory-made powdery substance containing different pesticide ingredients, which has a moldable appearance. It is used to coat seeds. After seeding, it can prevent the invasion of soil pests. Germination and unearth, the medicament is gradually released from the seed coat, absorbed by the crop, and it can also prevent the above-ground diseases and insect pests. The seed coating agent requires the active ingredient to be gradually released without harming the crop germination and growth. The seed coating film is water-permeable and breathable. Does not affect seed life and respiration. The seed coating agent has the characteristics of high efficiency, economy, safety, long residual period and multi-function.
