PET 3D printing filament is a common 3D printing material, which is made of polyethylene terephthalate (PET). PET is a thermoplastic polymer commonly used in applications such as making plastic bottles and fibers. PET 3D printing filament exhibits good properties in 3D printing, including high strength, rigidity and heat resistance. It has a high glass transition temperature (T_g), which means good stability and mechanical properties at high temperatures. PET 3D printing filament is suitable for many desktop 3D printers because it is easy to use, process and adhere. It has low

shrinkage, which helps reduce distortion during printing, and can print models with smooth surfaces and rich details. PET 3D printing filament has advantages over other materials in some applications. For example, due to its high heat resistance, PET 3D printing filament is often used to make parts and functional components that need to withstand high temperature environments. In addition, PET materials also have good chemical resistance and transparency, and are suitable for making transparent or translucent objects. PET 3D printing filament has a wide range of applications in industries, medical, manufacturing, and consumer goods. It can be used for prototyping, functional part manufacturing, mold making, industrial parts, medical devices and packaging materials, etc. With the development of 3D printing technology, the application of PET materials in various fields is also expanding.
