The global PET Anti-peeping Film market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

PET privacy film is a protective film that uses special optical technology (such as micro-louver structure) on a PET substrate to make the screen information clearly visible within a specific angle range, and cannot be peeped beyond this angle range. This film not only has the anti-scratch, anti-explosion, anti-fingerprint and other functions of general PET protective films, but also particularly enhances the effect of privacy protection. Through its unique optical design, PET privacy film effectively prevents others from peeping at the screen content from the side and protects the privacy and security of users. Despite its anti-peeping function, the PET privacy film can still maintain a high light transmittance, ensuring that users can get a clear visual experience when facing the screen. The PET material itself has high strength and toughness, making the privacy film resistant to scratches and wear in daily use.

PET privacy film is an anti-peeping protective film made of PET (polyethylene terephthalate) material, which is widely used in screen protection of electronic products such as mobile phones and tablets. It uses micro-louver optical technology to protect the screen while effectively preventing others from peeping at the screen content from the side and protecting user privacy. In recent years, with the popularization of electronic products such as smart phones and tablets and the enhancement of consumers' awareness of privacy protection, the market demand for PET privacy film has continued to grow. In summary, the PET privacy film market will continue to grow in the future.
