Pet antiemetics are veterinary prescription drugs used to control vomiting and nausea in companion animals, primarily dogs and cats. These medications are commonly indicated for gastrointestinal disorders, motion sickness, renal insufficiency, pancreatitis, poisoning, or chemotherapy-induced emesis. Based on their mechanisms of action, pet antiemetics include neurokinin-1 (NK1) receptor antagonists (e.g., maropitant), dopamine receptor antagonists (e.g., metoclopramide), serotonin 5-HT<sub>3</sub> receptor antagonists (e.g., ondansetron), antihistamines (e.g., diphenhydramine/promethazine), and anticholinergics (e.g., atropine). Among them, maropitant is widely regarded as the most effective and broadly used antiemetic due to its central and peripheral blockade of substance P, a key neurotransmitter in the vomiting reflex. These medications are available in both oral tablet and injectable forms, offering flexibility in clinical use. With proven safety and efficacy, several formulations—such as Zoetis' Cerenia®—are approved across major global markets and have become standard therapies in veterinary internal medicine, surgical prep, and emergency care.
