According to our LPI (LP Information) latest study, the global PET Bottle Recycling market size was valued at US$ 3661.2 million in 2023. With growing demand in downstream market, the PET Bottle Recycling is forecast to a readjusted size of US$ 4934.9 million by 2030 with a CAGR of 4.4% during review period.

The research report highlights the growth potential of the global PET Bottle Recycling market. PET Bottle Recycling are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of PET Bottle Recycling. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the PET Bottle Recycling market.

Bottles made of polyethylene terephthalate (PET, sometimes PETE) can be used to make lower grade products, such as carpets. To make a food grade plastic, the bottles need to be hydrolysed down to monomers, which are purified and then re-polymerised to make new PET. In many countries, PET plastics are coded with the resin identification code number '1' inside the universal recycling symbol, usually located on the bottom of the container.

Worldwide, approximately 7.5 million tons of PET were collected in 2011. This gave 5.9 million tons of flake. In 2009 3.4 million tons were used to produce fibre, 500,000 tons to produce bottles, 500,000 tons to produce APET sheet for thermoforming, 200,000 tons to produce strapping tape and 100,000 tons for miscellaneous applications.
