The global PET Coated Rubber Stoppers market size is projected to grow from US\$ million in 2022 to US\$ million in 2029; it is expected to grow at a CAGR of % from 2023 to 2029.

The rubber stopper portion of the closure is typically made from a high-quality elastomer material that is compatible with the pharmaceutical product and has excellent sealing properties. It forms a tight and secure seal when inserted into the container, preventing leakage and maintaining the integrity of the packaged product.

The PET coating serves several purposes:

Enhanced barrier properties: The PET layer acts as a barrier, providing additional protection against moisture, gases, and other environmental factors that could potentially affect the quality and stability of the pharmaceutical product. It helps to maintain the product's integrity and prevent contamination.

Improved compatibility: The PET coating enhances the compatibility of the rubber stopper with different types of drugs or formulations. It reduces the risk of interactions between the rubber material and the pharmaceutical product, ensuring the product's safety and efficacy.

Lubricity: The PET coating provides a smooth and lubricated surface, making it easier to insert and remove the stopper from the container. This facilitates the filling and dispensing processes in pharmaceutical manufacturing.

Tamper-evident feature: In some cases, PET coated rubber stoppers can be designed with tamper-evident features, such as tear-off bands or indicators, to provide visual evidence of product integrity and prevent unauthorized access or tampering.

PET coated rubber stoppers are commonly used in pharmaceutical applications that require an extra level of protection, such as vials for injectable drugs, infusion bottles, and other parenteral packaging. They contribute to maintaining the quality, safety, and stability of the pharmaceutical product throughout its shelf life.

PET coated rubber stoppers are specialized closures used in pharmaceutical packaging that consist of a rubber stopper coated with a layer of polyethylene terephthalate (PET). The PET coating provides additional protection and functionality to the rubber stopper.
