Abstracts

The global Pet Cooling Beds, Mats and Pads market size is predicted to grow from US\$ 303 million in 2025 to US\$ 486 million in 2032; it is expected to grow at a CAGR of 6.9% from 2026 to 2032.

Pet cooling beds, mats and pads refer to functional pet bedding products designed to help dogs, cats and other companion animals experience a cooler resting surface in warm indoor, outdoor, travel, kennel and seasonal summer environments. The category covers finished pet bedding products that use pressure-activated cooling gel, water-filled heat exchange, ice-pack inserts, cooling-touch fabrics, elevated airflow structures, evaporative cooling materials or gel-infused foam constructions to provide passive or semi-passive thermal comfort. Typical product formats include flat pet cooling mats, dog cooling pads, cat cooling mats, water-filled cooling beds, ice-pack cooling mats, elevated cooling cots, cooling fabric beds, cooling blankets and foam-based cooling pet beds. This study focuses on pet-specific finished products and OEM/ODM supply where cooling performance is an explicit product proposition and the product can be directly used as a resting surface.

Based on our research, pet cooling beds, mats and pads should be viewed as a functional pet bedding segment rather than a simple seasonal extension of conventional pet beds. The category addresses the need for thermal comfort during warm weather, indoor heat, outdoor resting, travel, crate use and senior-pet care. Compared with ordinary pet beds, these products require a more balanced design across cooling performance, material safety, bite and scratch resistance, cleanability, support, portability and pet acceptance. This makes the supply chain more complex than that of basic textile pet bedding. Competitive suppliers typically need access to pet product channels and capabilities in gel filling, water-sealed PVC/TPU structures, cooling

textiles, breathable mesh frames, foam bedding or integrated OEM/ODM production.

From a product-route perspective, pressure-activated gel mats remain the most scalable format for online and mass channels, while water-filled beds, ice-pack systems and elevated airflow cots serve differentiated use cases. The next stage of product development is likely to focus on non-toxic gel formulas, leak-resistant structures, washable covers, chew-resistant edges, cooling-touch textiles, heat-reflective fabrics, foldable travel formats and hybrid orthopedic cooling beds. Low-price gel pads will continue to face intense competition, but brands with stronger safety claims, durability, design and retail trust are better positioned to defend margins.

From a demand perspective, North America, Europe and Australia remain the core markets for higher-value branded products, while Asia provides incremental growth through online channels, rising pet ownership and existing consumer familiarity with cooling fabrics. Demand is particularly visible among owners of large dogs, senior pets, brachycephalic breeds, outdoor dogs and pets living in hot urban environments. The main risks are seasonality, inventory swings, private-label price pressure, product leakage complaints and substitution by air conditioning or basic cooling surfaces. Even so, rising summer heat exposure, pet humanization and the broader move toward functional pet care products support a mid- to high-single-digit growth outlook over the medium term.
