The global PET Depolymerase market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

PET depolymerase is an enzyme that catalyzes the breakdown of polyethylene terephthalate (PET), a common synthetic polymer used in plastic bottles, clothing, and packaging materials. This enzyme facilitates the depolymerization process by hydrolyzing the ester bonds in PET, converting it into its constituent monomers, such as terephthalic acid and ethylene glycol. PET depolymerase plays a significant role in recycling and environmental sustainability, as it enables the efficient degradation of PET plastics, reducing their impact on landfills and the environment. The development and application of PET depolymerase represent a promising advancement in addressing the global issue of plastic waste and promoting circular economy practices.

United States market for PET Depolymerase is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
