The report requires updating with new data and is sent in 48 hours after order is placed.

The global Phenylalanine market size is predicted to grow from US$ 882 million in 2025 to US$ 992 million in 2031; it is expected to grow at a CAGR of 2.0% from 2025 to 2031.

Phenylalanine (symbol Phe) is an essential ?-amino acid with the formula C9H11NO2. It can be viewed as a benzyl group substituted for the methyl group of alanine, or a phenyl group in place of a terminal hydrogen of alanine. The phenylalanine is named '2-aminophenylalanine', which is a type of ?-amino acid. L-phenylalanine is a biologically active optical isomer.

In the global L-phenylalanine industry, Japan's Ajinomoto, Korea Daesang etc. are leaders in this industry. However, the monopoly phenomenon of the L-phenylalanine industry is not obvious. Through continuous technological innovation, Chinese companies have broken the monopoly of the original industry giants on the L-phenylalanine market. Amino acid technology has gradually matured and is not innovative in China. In the international market, American Newt and Dutch DSM exited the industry in 2014 and 2006, respectively.

LP Information, Inc. (LPI) ' newest research report, the “Phenylalanine Industry Forecast” looks at past sales and reviews total world Phenylalanine sales in 2024, providing a comprehensive analysis by region and market sector of projected Phenylalanine sales for 2025 through 2031.
