Abstracts

The global Pet Foods market size is predicted to grow from US\$ 19241 million in 2025 to US\$ 27828 million in 2032; it is expected to grow at a CAGR of 5.6% from 2026 to 2032.

In 2025, global production of Pet Foods reached approximately 17.8 million metric tons, with an average price of around USD 1,105 per metric ton. Pet Foods refer to industrially manufactured foods specifically formulated to provide balanced nutrition for pets (primarily dogs and cats), covering a full spectrum from basic nutritional fulfillment to functional health management. Main product forms include dry food, semi-moist food, and wet food. Formulations cover basic nutrition, functional/health-focused, and prescription diets. Target species include canine, feline, and other pets. Primary ingredients include grains, meat and meat meal, fish meal, vegetables, vitamin and mineral premixes. Distribution channels cover online e-commerce platforms, offline pet specialty stores, supermarkets, and veterinary clinics.

The global Pet Foods market is experiencing steady growth, driven primarily by the deepening pet humanization trend, continued growth in pet population, premiumization and functional consumption upgrades, and expansion of the middle class in emerging markets. North America is the largest pet food market globally, leading the industry in premiumization and functional innovation; Asia-Pacific is the fastest-growing region, driven by the rapid rise of the pet economy in China, India, and Southeast Asia. Industry trends are focused on high-meat content, grain-free, natural and organic, and functional formulations, while the share of e-commerce channels continues to rise, with DTC subscription models and personalized customization reshaping the consumer experience. Future growth in emerging market penetration, demand release for senior pet-specific foods, development of precision nutrition technologies, and sustainable ingredient applications will collectively drive steady expansion of the Pet Foods market.
