Abstracts

The global Pet Grooming Software market size is predicted to grow from US$ 132 million in 2025 to US$ 229 million in 2032; it is expected to grow at a CAGR of 8.3% from 2026 to 2032.

Pet grooming software is a digital management tool designed specifically for pet grooming shops, independent groomers, and chain pet service providers. It aims to improve appointment efficiency, customer retention, service standardization, and business decision-making capabilities.

With the continuous development of the global pet economy, pets' role in the family has shifted from guarding the home to becoming emotional companions, and owners are willing to pay higher fees for their pets' health, appearance, and comfort. Grooming services are no longer limited to basic washing and grooming, but encompass high-value-added services such as styling, spa treatments, and skin management, significantly increasing the frequency and professionalism required. This consumption upgrade is forcing grooming salons to improve service standardization, appointment efficiency, and customer experience, thereby creating a strong demand for digital management tools.
