PET Heat shrink label refers to a type of label made from polyethylene terephthalate (PET) material that is designed to shrink and conform to the shape of a container when heat is applied.

These labels are commonly used in the packaging industry to provide a decorative and functional finish to products. They can be found on a wide range of items such as bottles, cans, jars, and containers for food, beverages, cosmetics, and other consumer goods.

When the PET heat shrink label is applied to a container, it usually has a larger size than the container itself. The label is then heated, either through steam tunnels or heat

guns, causing it to shrink and tightly wrap around the container, creating a seamless and custom-fit appearance.

PET heat shrink labels offer several benefits, including excellent durability, resistance to moisture and abrasion, high printing quality, and the ability to withstand a wide range of temperatures. They can be printed with vibrant colors, designs, branding elements, and product information, making them an attractive option for marketing and labeling purposes.
