Pet Topical Parasiticide refers to externally applied parasiticide formulations for companion animals such as dogs and cats, designed to control external parasites (e.g., fleas, ticks, lice, mites) and, in certain formulations, cover select internal parasites. Administered topically on the animal's skin, the active ingredients spread via skin lipids or are absorbed through the skin to provide systemic protection. These products are widely used in veterinary clinics and household settings due to their ease of use, high compliance, and minimal gastrointestinal side effects, making them a cornerstone of modern pet parasite control programs.
