The global Petrol Floor Grinder market size is predicted to grow from US\$ 112 million in 2025 to US\$ 144 million in 2032; it is expected to grow at a CAGR of 3.7% from 2026 to 2032.

Petrol Floor Grinder is a purpose-built machine that are used for grinding and polishing concrete. Machines that grind concrete floors are usually made to handle much more stress and will have more power to drive the unit as concrete has a much higher sliding friction than marble or granite which is also worked wet, therefore with less friction. In fact some types of marble will spark when it is ground dry, causing deep damage to the marble surface.

The petrol floor grinder, as a type of surface treatment equipment, holds great promise in the market. With the continuous growth of the construction and flooring renovation industries, there is an increasing demand for efficient and convenient tools for floor refurbishment. The petrol floor grinder has gained popularity due to its robust performance, high productivity, and flexible mobility. It can be used for grinding, polishing, removing old coatings, and restoring various types of surfaces, such as concrete, marble, granite, and more. The fuel-powered nature of this equipment frees it from the constraints of power sources, making it suitable for various job site environments, especially in locations with no power supply. Additionally, petrol floor grinders have lower maintenance costs and high durability, aligning with the market's growing emphasis on cost-effectiveness and sustainability trends. Therefore, it is foreseeable that petrol floor grinders will continue to experience strong demand in the future market, bringing innovation and convenience to the surface treatment industry.
