Rising pet adoption coupled with rising concerns regarding pet health and prevalence of bacterial infection, especially in dogs, is anticipated to further propel the market growth. Leptospirosis, staphylococcal infection, bacterial ear infection, actinomycosis, and nocardiosis are some of the most common forms of infections in pets. Moreover, pets are susceptible to bacterial diseases, such as plague, brucellosis, and Lyme disease. According to the qualitative report by the CDC in 2018, cats are more prone to plague than dogs and can pass on the infection to humans as well.
