PFC-free waterproofing agent is a special waterproofing agent product. Its main feature is that it does not contain perfluorinated compounds (PFC) in its composition. PFC is a common ingredient in water and oil repellents. However, because the harmful substances that may be released during production and use pose potential risks to the environment and human health, more and more companies and consumers are paying attention to and choosing PFC-free waterproofing agents.

PFC-free waterproofing agents are committed to reducing the impact on the environment while maintaining waterproof performance, embodying the concept of green environmental protection. They usually use other environmentally friendly ingredients to form a waterproof film on the surface of the material through specific chemical reactions or physical effects, thereby achieving a waterproof effect.

The global PFC-Free Waterproofing Agents market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
