PFPE (perfluoropolyether) fluorinated lubricants are a type of synthetic lubricant that consists of perfluorinated carbon, oxygen, and fluorine atoms. These lubricants are known for their exceptional thermal and chemical stability, as well as their resistance to extreme conditions. PFPE lubricants are widely used in industries where conventional lubricants may not perform adequately due to high temperatures, aggressive chemicals, or harsh environments.

Industries requiring high-performance lubrication solutions, such as aerospace, automotive, electronics, and semiconductor manufacturing, continued to drive the demand for PFPE lubricants due to their exceptional properties.
