## Abstracts

The global pH and ORP Electrode Storage Solution market size is predicted to grow from US\$ 122 million in 2025 to US\$ 164 million in 2031; it is expected to grow at a CAGR of 5.0% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

The pH and ORP electrode storage solution is a solution specially used to maintain the activity of the electrochemical sensor, which can prevent the electrode from drying, the glass membrane from aging, and the reference electrolyte from crystallizing. The pH electrode storage solution is usually a 3-4 mol/L KCl solution (containing a buffer), while the ORP electrode requires an antioxidant electrolyte (such as KNO<sub>3</sub> or a special inert solution). The storage solution can extend the life of the electrode (by 30-50%) and ensure measurement stability (the startup response time is shortened by 20%).

United States market for pH and ORP Electrode Storage Solution is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
