The global Ph And Temperature Transmitters market size is predicted to grow from US\$ 980 million in 2025 to US\$ 1598 million in 2032; it is expected to grow at a CAGR of 7.3% from 2026 to 2032.

In 2025, global Ph And Temperature Transmitters production reached approximately 2 million units, with an average global market price of around US\$ 500 per unit. Annual production capacity is 2.4 million units. Gross Profit Margin: 35%. pH and temperature transmitters are industrial electronic devices used to continuously measure, convert, and transmit pH levels (acidity/alkalinity) and temperature readings from process environments to control systems such as PLCs, DCS, or SCADA platforms. The pH and temperature transmitters industry chain starts with upstream suppliers of sensing elements (pH electrodes, RTDs, thermocouples) and electronic components, followed by manufacturers that assemble, calibrate, and certify transmitters with signal processing and communication functions. Downstream, products are distributed through automation channels and system integrators to industries such as water treatment, chemicals, food & beverage, pharmaceuticals, and power generation for process monitoring and control. PH and temperature transmitters are indispensable tools in modern industrial automation, bridging the gap between raw process data and actionable insights.
