The global PH Probes & Electrodes market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of % from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Almost all pH probes on the market are combination pH probes. Purchasing individual pH electrodes and Reference Electrodes is largely a thing of the past. All pH probes on this site are combination pH probes. The sensitivity of the pH Electrode to hydrogen ion activity is a function of temperature.

The most widely used ion-selective electrode is the glass pH electrode, which utilizes a thin glass membrane that is responsive to changes in H⁺ activity. F. Haber, in 1901, was the first person to observe that the voltage of a glass membrane changed with the acidity of a solution.
