## Abstracts

The global Phage Display Library Construction Services market size is predicted to grow from US\$ 180 million in 2025 to US\$ 282 million in 2032; it is expected to grow at a CAGR of 6.5% from 2026 to 2032.

Phage Display Library Construction Services are specialized biotechnological services that design, build, and validate diverse phage display libraries—molecular tools where peptides, antibody fragments (e.g., scFv, Fab, VHH), or proteins are expressed on bacteriophage surfaces while their corresponding genetic sequences are encapsulated within the viral particle. The streamlined workflow includes custom library design (specifying molecule type, diversity, and source: natural naive, immune, synthetic, or semi-synthetic), generation of genetic repertoires via synthesis or PCR, cloning into phage vectors (e.g., M13, T7) to fuse target molecules to coat proteins, bacterial transformation, phage packaging, large-scale amplification, and rigorous quality control (phage titer measurement, diversity assessment via NGS, and display efficiency validation). Clients can customize parameters like display valency (monovalent, oligovalent, polyvalent) and codon optimization for specific hosts, enabling access to high-quality libraries without in-house technical expertise. These services accelerate applications including therapeutic antibody discovery, peptide drug development, and protein-protein interaction research by providing validated, ready-to-use libraries tailored to project needs.
