The global Phage Display Library Services market size is predicted to grow from US\$ 570 million in 2025 to US\$ 912 million in 2032; it is expected to grow at a CAGR of 7.0% from 2026 to 2032.

Phage Display Library Services are specialized biotechnological services that provide end-to-end solutions for constructing, screening, and validating phage display libraries—powerful molecular tools used to identify peptides, proteins, or antibodies with specific binding or functional properties against target molecules. Service providers offer customizable workflows tailored to client needs, starting with library design (e.g., linear peptide libraries, cyclic peptide libraries, antibody fragment libraries, or protein domain libraries) and synthesis of diverse genetic repertoires, followed by cloning into phage vectors, packaging into infectious phage particles, and amplification to generate large, diverse libraries (often containing 10⁷–10¹⁰ unique clones). Core services include affinity-based screening (biopanning) against immobilized or soluble targets (e.g., receptors, enzymes, antigens, or cell surfaces) to isolate phage clones displaying high-affinity binders, followed by validation steps such as DNA sequencing, binding affinity measurement (ELISA, SPR), and functional characterization. Widely used in biopharmaceutical R&D, academic research, and diagnostic development, phage display library services support applications ranging from therapeutic antibody discovery and vaccine target identification to peptide-based drug development and protein-protein interaction mapping.
