Pharmaceutical carbohydrate excipients refer to carbohydrate substances used as excipients in pharmaceutical preparations. They usually originate from natural plant or animal resources, such as starch, glucose, sucrose, and lactose, and have multiple functions and uses. These excipients primarily serve as stabilizers in pharmaceutical preparations, maintaining the physical and chemical stability of drugs and preventing degradation or deterioration during storage and transportation. At the same time, they can also serve as energy sources, providing necessary energy support for drugs and thereby enhancing their efficacy. Furthermore, pharmaceutical carbohydrate excipients can improve the taste and flavor of drugs, making them more acceptable and easier for patients to take. During the pharmaceutical manufacturing process, the types and quantities of pharmaceutical carbohydrate excipients require strict screening and control to ensure the safety and effectiveness of the drugs.
