Abstracts

The global Pharmaceutical Grade Croscarmellose Sodium market size is predicted to grow from US\$ 86.09 million in 2025 to US\$ 122 million in 2032; it is expected to grow at a CAGR of 5.2% from 2026 to 2032.

Pharmaceutical Grade Croscarmellose Sodium is a white powder that is insoluble in water but swells upon absorbing water, making it an important pharmaceutical excipient. Its cross-linked structure endows it with strong hygroscopic and swelling properties, allowing it to rapidly disintegrate tablets upon contact with moisture, thereby accelerating drug release and improving bioavailability.

The core upstream raw material is refined cotton (or high-purity wood pulp cellulose), which forms the basic framework of cellulose ethers. The purity and batch stability of upstream raw materials are crucial to the quality of the final pharmaceutical excipients. Downstream applications are mainly concentrated in solid dosage forms. Global sales are projected to reach around 10,000 tons by 2025, with an average global market price of approximately \$7,000-\$11,000 per ton. The gross profit margin for major producers in the industry is estimated at 25%-40%.

Pharmaceutical-grade croscarmellose sodium is a mature but steadily growing category of pharmaceutical excipients. Core demand stems from the continued use of highly efficient disintegrants in tablets, capsules, orally disintegrating tablets, and immediate-release formulations, particularly in generic drug consistency evaluation, dissolution improvement of poorly soluble drugs, and direct compression processes. The main barriers to entry in the industry are not production capacity, but rather pharmacopoeia compliance, batch-to-batch stability, particle size control, microbial control, DMF data, and customer audit certification. Simultaneously, it faces competition from substitutes

such as croscopovidone and sodium carboxymethyl starch. Overall, future growth will primarily come from high-end generic drugs, OTC drugs, nutritional tablets, domestic substitution, and upgrades in compound/co-processed excipients. Companies with stable quality systems and international customer certification capabilities are more likely to command premiums.
