Pharmaceutical grade gelatin is colorless, water soluble, translucent, and a delicate element that has a high molecular weight. It is derived from skin, white connective tissues, and bones of animals by partial hydrolysis of collagen. Gelatin is harmless and absorbable, which is why it is employed in various pharmaceutical applications. It is used as a suspending agent (assists in maintaining the stability of pharmaceutical suspensions) and in manufacturing capsules. In addition, gelatin serves as a rich source of protein and is also used as a plasma substitute.

The global pharmaceutical market is 1475 billion USD in 2022, growing at a CAGR of 5% during the next six years. The pharmaceutical market includes chemical drugs and biological drugs. For biologics is expected to 381 billion USD in 2022. In comparison, the chemical drug market is estimated to increase from 1005 billion in 2018 to 1094 billion U.S. dollars in 2022. The pharmaceutical market factors such as increasing demand for healthcare, technological advancements, and the rising prevalence of chronic diseases, increase in funding from private & government organizations for development of pharmaceutical manufacturing segments and rise in R&D activities for drugs. However, the industry also faces challenges such as stringent regulations, high costs of research and development, and patent expirations. Companies need to

continuously innovate and adapt to these challenges to stay competitive in the market and ensure their products reach patients in need. Additionally, the COVID-19 pandemic has highlighted the importance of vaccine development and supply chain management, further emphasizing the need for pharmaceutical companies to be agile and responsive to emerging public health needs.
