The global Pharmaceutical-grade Hydantoin market size is predicted to grow from US\$ 63.59 million in 2025 to US\$ 112 million in 2032; it is expected to grow at a CAGR of 8.2% from 2026 to 2032.

In 2025, global production of pharmaceutical-grade hydantoin reached 9,500 tons, with an average selling price of USD 6,800 per ton, a total production capacity of 12,000 tons, and an estimated gross margin of 38%.

Pharmaceutical-grade hydantoin refers to hydantoin compounds manufactured and controlled under medicinal quality requirements, primarily used as raw materials for APIs or key pharmaceutical intermediates in synthetic routes for antiepileptic drugs and other prescription medicines. Compared with industrial grades, pharmaceutical-grade hydantoin features tighter specifications on purity, impurity profile, residual solvents, heavy metals, and microbiological limits. Production is typically managed within a controlled quality system, with test methods and release criteria aligned with standards such as USP, EP, or the Chinese Pharmacopoeia to support drug R&D, regulatory filings, and commercial manufacturing.

Upstream supply mainly includes basic chemical feedstocks required in hydantoin synthesis routes (e.g., urea/carbamate-related raw materials, glyoxylic acid or other carbonyl intermediates), solvents, catalysts/additives, as well as pharmaceutical packaging and QC consumables. High requirements are placed on impurity control, solvent recovery, crystallization/purification efficiency, and batch-to-batch consistency. Midstream players consist of pharmaceutical-grade hydantoin manufacturers and pharma-intermediate suppliers, with core steps typically covering chemical synthesis, crystallization and purification, drying, milling/sieving, and release testing under a GMP

or controlled quality system. Downstream customers are mainly pharmaceutical companies and CDMOs/CMOs, where hydantoin is used for antiepileptic and other prescription drug API/intermediate production as well as R&D and pilot manufacturing. It is commonly supplied through pharmaceutical intermediate channels or customized supply agreements, with strong emphasis on supply reliability, traceability, and regulatory documentation support (e.g., CoA and DMF-related materials).

United States market for Pharmaceutical-grade Hydantoin is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Pharmaceutical-grade Hydantoin is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
