The global Pharmaceutical Grade Monoammonium Glycyrrhizinate market size is predicted to grow from US\$ 42.75 million in 2025 to US\$ 77.01 million in 2032; it is expected to grow at a CAGR of 8.9% from 2026 to 2032.

Monoammonium Glycyrrhizinate (MAG) is a bioactive compound derived from the root of the licorice plant, *Glycyrrhiza glabra*. It is a white crystalline powder with a special sweet taste and practically no odor. MAG is known for its range of therapeutic properties, including anti-inflammatory, antiviral, and hepatoprotective effects. It is commonly utilized in pharmaceutical.

In the pharmaceutical industry, MAG is employed for its hepatoprotective properties, making it useful in the treatment of chronic persistent hepatitis, chronic active hepatitis, liver poisoning, and early liver cirrhosis. It is also used topically for allergic or infectious skin inflammation and orally for its aldosterone effects in electrolyte regulation.

Regionally, Asia-Pacific holds a significant share of the Pharmaceutical Grade MAG market, with countries like China and India being major producers and consumers. The presence of key manufacturers and the traditional use of licorice in these regions contribute to this dominance. North America and Europe also represent substantial markets, driven by the pharmaceutical industries' demand for natural compounds.

Monoammonium glycyrrhizinate has hormone like activity, but has no side effects of hormone. It not only has significant curative effects on respiratory diseases such as tracheitis, bronchitis, cough, asthma, but also has marvelous effects on digestive tract infection, hepatitis B, oral ulcer and gastric ulcer. It has strong detoxification effects on many kinds of toxins, such as diphtheria toxin, rapacian toxin, tetanus toxin and snake

venom. At the same time, it also has the similar effect of adrenocortical hormone.
