The global Pharmaceutical Grade PDO market size is predicted to grow from US\$ 254 million in 2025 to US\$ 426 million in 2032; it is expected to grow at a CAGR of 7.7% from 2026 to 2032.

In 2025, global Pharmaceutical Grade PDO production reached approximately 1,444.44 tons, with an average global market price of around US\$180 per kg.

The gross profit margin of major companies in the industry is between 35%-55%.

In 2025, the global production capacity of Pharmaceutical Grade PDO was approximately 1,925.93 tons.

Pharmaceutical Grade PDO is a high-purity absorbable polymer material mainly used in medical sutures, aesthetic lifting threads, orthopedic fixation materials, tissue engineering carriers, and other implantable or medical-grade products. It requires strict control of purity, molecular weight, residual monomers, biocompatibility, degradation behavior, sterilization adaptability, and regulatory compliance for medical and pharmaceutical applications.

The industrial chain of Pharmaceutical Grade PDO covers upstream monomers, catalysts, purification agents, polymerization equipment, solvents, sterile packaging, and testing reagents. The midstream consists of polymerization, purification, drying, granulation, sterilization validation, quality control, and medical-grade documentation. Downstream applications mainly include absorbable sutures, aesthetic threads, orthopedic materials, wound closure products, tissue repair materials, and medical device manufacturing.

Growing demand for medical absorbable sutures and anti-aging cosmetic materials fuels the market expansion of pharmaceutical grade PDO. With excellent biocompatibility and degradability, it is widely used in clinical medical and aesthetic injection fields. Strict purification standards and stable molecular structure further ensure product safety and reliability.
