## Abstracts

The global Pharmaceutical Grade PVDC Latex market size is predicted to grow from US\$ 173 million in 2025 to US\$ 261 million in 2032; it is expected to grow at a CAGR of 6.1% from 2026 to 2032.

Pharmaceutical Grade PVDC Latex is a polymer emulsion produced by emulsion polymerization using vinylidene chloride as the main raw material. It is a high-barrier functional material specially designed for pharmaceutical packaging and medical consumables. It exhibits excellent oxygen barrier, moisture resistance, chemical resistance and sterilization resistance, and can form a dense and uniform film on PVC, aluminum foil, composite films and other substrates, effectively isolating oxygen, water vapor and external pollutants to extend the shelf life and stability of pharmaceuticals and medical devices. Classified by barrier grade, curing system and application process, it includes standard barrier grade, high barrier grade and sterilization-resistant grade. It is widely used in pharmaceutical packaging, sterile medical device packaging, biologics and vaccine packaging, complying with hygienic, safety and barrier requirements of the medical industry, serving as a key core coating material in the high-end medical packaging industrial chain. In 2025, global sales of Pharmaceutical Grade PVDC Latex will be approximately 55,113 tons, with an average industry price of US\$3,209 per ton. The global industry average gross profit margin is about 30%, while leading companies can achieve a gross profit margin of 35%-40%.

As a core barrier material for high-end medical packaging, Pharmaceutical Grade PVDC Latex is currently in a stage of steady growth, with both certainty and growth potential in industry development. Benefiting from the global upgrading of the pharmaceutical industry, the expansion of demand for biologics and vaccines, and the continuous improvement of medical packaging compliance standards, its market demand continues

to be released. At present, the global market is still dominated by international giants such as SK and Asahi Kasei, but domestic enterprises have gradually broken through technical monopolies, achieved large-scale production, and accelerated the process of domestic substitution. The industry presents a pattern of 'high-end concentration and mid-end competition', with high-barrier, sterilization-resistant and environmentally friendly products becoming market hotspots. At the same time, affected by factors such as raw material cost fluctuations and technical barriers, there is obvious stratification in industry profitability. In the long run, driven by the guidance of green environmental protection policies and the trend of high-end medical packaging, the application scenarios of Medical PVDC Latex will be further expanded, and domestic enterprises are expected to increase their market share by virtue of cost and compliance advantages, and the industry will develop in the direction of high quality and intensification.
