Camphor is conventionally prepared from the extracts of the camphor tree, while the one produced using chemical synthesis is known as synthetic camphor. One of the most important raw material employed in the manufacturing of synthetic camphor is turpentine oil. Pharmaceutical grade synthetic camphor is a high purity product involving more than 98% synthetic camphor and used in manufacturing inhalants (such as nasal decongestants) and topical products (such as muscle rub ointments). Owing to its toxicity, synthetic camphor is not recommended to be administered orally.
