Pharmaceutical Metal Scavengers are materials that are designed to remove metal impurities from pharmaceutical products. These metal impurities may come from the raw materials used in the manufacturing process, as well as from the processing equipment and packaging materials. The presence of these metal impurities in pharmaceutical products can be harmful to human health, and can also affect the quality, stability, and efficacy of the drug. Pharmaceutical Metal Scavengers work by

selectively binding to metal impurities, removing them from the pharmaceutical product, and preventing them from reacting with other components in the drug formulation.
