To address issues such as the lack of transparency in drug pricing mechanisms, the disconnect between medical insurance payment standards and market pricing, and the decline in product accessibility caused by companies' improper pricing strategies, specialized drug pricing services have emerged. Since the early 21st century, when global mechanisms for drug value assessment and medical insurance market access were gradually established, the field of drug market access and pricing consulting has experienced significant growth. Today, drug pricing services have evolved into a comprehensive professional service system encompassing various functions, including cost estimation, value assessment, international reference pricing, and support for medical insurance negotiations. Widely applied in the pricing of newly launched innovative drugs, the bidding for generic drugs in centralized procurement, and the charitable pricing of orphan drugs for rare diseases, this system significantly enhances both the scientific rigor of pricing decisions and their market acceptance.
