A Pharmaceutical PTP Packaging Machine, also known as Pharmaceutical Press Through Packaging Machine, is a specialized piece of equipment designed specifically for the packaging of pharmaceutical products. It operates based on thermoforming and heat - sealing principles. First, a roll of pharmaceutical - grade plastic sheet (such as PVC or PVDC) is heated to a softened state. Then, molds are used to form blisters in the shape of the medications through suction or blowing methods. Next, tablets, capsules, pills, etc., are precisely filled into these blisters via an automatic filling system. Subsequently, an aluminum foil printed with drug information is placed over the blisters, and a heat - sealing process is carried out under specific temperature, pressure, and time conditions to create sealed packaging units.
