Abstracts

The global Pharmaceutical PVC/PCTFE Composite Sheets market size is predicted to grow from US$ 393 million in 2025 to US$ 646 million in 2032; it is expected to grow at a CAGR of 7.5% from 2026 to 2032.

Pharmaceutical PVC/PCTFE composite sheets are high-barrier packaging materials widely used in blister packs for moisture-sensitive drugs, including solid oral dosage forms, biologics, and certain high-potency ingredients. The upstream raw materials consist of pharmaceutical-grade polyvinyl chloride (PVC) film and polychlorotrifluoroethylene (PCTFE) barrier film. Major suppliers of PVC include Shin-Etsu Chemical, Hanwha Chemical, and Sinopec, while leading producers of PCTFE are companies such as 3M, Honeywell, and Daikin Industries.

The lamination and coating processes are carried out by specialized pharmaceutical packaging companies such as Bilcare. By combining PVC with PCTFE, they achieve extremely low water vapor transmission rates and excellent stability, thereby meeting the stringent storage requirements of highly sensitive pharmaceuticals.

On the downstream side, the primary customers are pharmaceutical manufacturers, particularly multinational pharmaceutical firms and generic drug companies requiring high-barrier packaging solutions, including Pfizer, Novartis, Roche, and Sanofi, as well as Indian and Chinese exporters of solid oral preparations. With the increasing demand for high-value generics, complex formulations, and biologics, the market for PVC/PCTFE composite sheets is expected to grow steadily.

In 2024, the global average price of pharmaceutical PVC/PCTFE composite sheet was approximately USD 3,080 per ton, with a total annual sales volume of about 123,000
