According to this study, the global Pharmaceutical Regulatory Affairs market size will reach US\$ 16840 million by 2031.

Pharmaceutical Regulatory Affairs, or Pharma Regulatory Affairs, refers to the professionals who maintain regulations from within the industry. The pharmaceutical industry is the most regulated of all industries. Regulatory affairs professionals are key, but perhaps overlooked, players in drug development. They are the primary communications link between the company and agencies such as FDA, and they are responsible for keeping up with the increasing scope and complexity of regulations. In the pharmaceutical industry, regulatory affairs professionals have expertise in the legal and regulatory environments, as well as in clinical research protocols.

The global pharmaceutical market is 1475 billion USD in 2022, growing at a CAGR of 5% during the next six years. The pharmaceutical market includes chemical drugs and biological drugs. For biologics is expected to 381 billion USD in 2022. In comparison, the chemical drug market is estimated to increase from 1005 billion in 2018 to 1094 billion U.S. dollars in 2022. The pharmaceutical market factors such as increasing demand for healthcare, technological advancements, and the rising prevalence of chronic diseases, increase in funding from private & government organizations for development of pharmaceutical manufacturing segments and rise in R&D activities for drugs. However, the industry also faces challenges such as stringent regulations, high costs of research and development, and patent expirations. Companies need to continuously innovate and adapt to these challenges to stay competitive in the market and ensure their products reach patients in need. Additionally, the COVID-19 pandemic has highlighted the importance of vaccine development and supply chain management, further emphasizing the need for pharmaceutical companies to be agile and responsive

to emerging public health needs.
