Pharmaceutical Type I borosilicate glass tubing is a high-quality, borosilicate glass material specifically designed for use in pharmaceutical packaging applications. It is known for its superior chemical resistance, particularly to acids, alkalis, and organic solvents, making it highly suitable for storing and packaging injectable drugs, vaccines, and other sensitive formulations. Type I glass tubing is manufactured to strict standards to ensure low leachability, preventing any chemical interaction between the container and the pharmaceutical product. Its excellent thermal stability allows it to withstand autoclaving and other sterilization methods, ensuring safety and maintaining the integrity of the drug inside. Due to its durability, transparency, and inert properties, Type I glass tubing is commonly used to produce vials, ampoules, and prefilled syringes, providing a reliable and secure solution for the packaging of parenteral drugs and biologics.
