The drug pinhole inspector is a professional device used to detect the sealing integrity and tiny pinhole defects of drug packaging. It is mainly used in the quality control of drug packaging containers such as vials, ampoules, blister packaging, infusion bags, and prefilled syringes. Its working principle is usually based on technologies such as high-voltage discharge, conductivity, vacuum decay, laser imaging or visual inspection. It can accurately identify tiny pinholes, cracks or poor sealing problems that are not visible to the naked eye, and ensure the sterility and safety of drugs during storage and transportation. Most modern drug pinhole inspectors have high-speed, non-destructive, and fully automatic detection capabilities. They can be linked with production lines to achieve 100% online detection of each product package, and are widely used in the quality inspection link of pharmaceutical companies. This equipment not only meets the requirements of GMP, FDA and other regulations, but is also an important technical means to ensure the quality of high-demand drug packaging such as injections and sterile preparations. It has become one of the indispensable key equipment in the production process of the pharmaceutical industry.
